

# Assignment-2: Face Classification/Verification

Gaurav Batra

November 2, 2019

Instructor: Prof. C.V. Jawahar.

## 1 Questions

### 1.1 Problem-1

1. What are "Eigen Faces"?

**Eigen Faces** are the set of eigen-vectors of the covariance-matrix of face images that are used in the problem of human face recognition. Basically, they are the faces that are reconstructed after applying dimensionality reduction techniques like **PCA** on a given dataset

2. How many eigen vectors/faces are required to reconstruct a person in the three datasets?

By seeing the below given eigen-value spectrum, we can say that  $k = 50$  to  $60$  is a satisfactory value for dimensionality reduction for all 3 given datasets.

**IMFDB**

**IIT-CFW**

### Yale Face Database

Also the scatter plots of each of the database is attached in the jupyter notebook.

3. Which dataset is difficult to represent compactly with fewer eigen-vectors? Why is that? Explain with your empirical observations and intuitive answers?

From the above graph, we notice that faces in the IIIT-CFW Database are difficult to reconstruct with fewer eigen-vectors. This, may be due the great details present in the IIIT-CFW cartoon images that few eigen-vectors are not able to reconstruct the cartoon completely or satisfactorily.

4. Which person/identity is difficult to represent compactly with fewer eigen-vectors?

The class that is most difficult to represent using fewer eigen-vectors depends on the number of components  $k$  chosen. For  $k = 10$ , the classes are 3, 4, 10 for IMFDB, IIIT-CFW and Yale-Face Dataset respectively. For  $k = 55$ , the classes are 3, 5, 4.

## 1.2 Problem-2

1. Use an MLP classifier and find the classification accuracy? Which method works well?

In order to do a comparative study, I tried all combinations of feature extraction and classifiers. The results are as follows:

### IMFDB

|    | Feature              | Reduced Dimension Space | Classification Error | Accuracy | F1-Score |
|----|----------------------|-------------------------|----------------------|----------|----------|
| 0  | PCA with MLP         | 55                      | 0.100                | 0.900    | 0.900    |
| 1  | PCA with SVM         | 55                      | 0.150                | 0.850    | 0.850    |
| 2  | PCA with LOGISTIC    | 55                      | 0.150                | 0.850    | 0.850    |
| 3  | KPCA with MLP        | 55                      | 0.525                | 0.475    | 0.475    |
| 4  | KPCA with SVM        | 55                      | 0.700                | 0.300    | 0.300    |
| 5  | KPCA with LOGISTIC   | 55                      | 0.500                | 0.500    | 0.500    |
| 6  | LDA with MLP         | 7                       | 0.225                | 0.775    | 0.775    |
| 7  | LDA with SVM         | 7                       | 0.175                | 0.825    | 0.825    |
| 8  | LDA with LOGISTIC    | 7                       | 0.175                | 0.825    | 0.825    |
| 9  | KLDA with MLP        | 7                       | 0.250                | 0.750    | 0.750    |
| 10 | KLDA with SVM        | 7                       | 0.175                | 0.825    | 0.825    |
| 11 | KLDA with LOGISTIC   | 7                       | 0.175                | 0.825    | 0.825    |
| 12 | VGG with MLP         | 4096                    | 0.100                | 0.900    | 0.900    |
| 13 | VGG with SVM         | 4096                    | 0.100                | 0.900    | 0.900    |
| 14 | VGG with LOGISTIC    | 4096                    | 0.100                | 0.900    | 0.900    |
| 15 | RESNET with MLP      | 2048                    | 0.025                | 0.975    | 0.975    |
| 16 | RESNET with SVM      | 2048                    | 0.050                | 0.950    | 0.950    |
| 17 | RESNET with LOGISTIC | 2048                    | 0.025                | 0.975    | 0.975    |

### IIIT-CFW

|    | Feature              | Reduced Dimension Space | Classification Error | Accuracy | F1-Score |
|----|----------------------|-------------------------|----------------------|----------|----------|
| 0  | PCA with MLP         | 55                      | 0.485294             | 0.514706 | 0.514706 |
| 1  | PCA with SVM         | 55                      | 0.455882             | 0.544118 | 0.544118 |
| 2  | PCA with LOGISTIC    | 55                      | 0.411765             | 0.588235 | 0.588235 |
| 3  | KPCA with MLP        | 55                      | 0.573529             | 0.426471 | 0.426471 |
| 4  | KPCA with SVM        | 55                      | 0.573529             | 0.426471 | 0.426471 |
| 5  | KPCA with LOGISTIC   | 55                      | 0.544118             | 0.455882 | 0.455882 |
| 6  | LDA with MLP         | 7                       | 0.676471             | 0.323529 | 0.323529 |
| 7  | LDA with SVM         | 7                       | 0.602941             | 0.397059 | 0.397059 |
| 8  | LDA with LOGISTIC    | 7                       | 0.617647             | 0.382353 | 0.382353 |
| 9  | KLDA with MLP        | 7                       | 0.661765             | 0.338235 | 0.338235 |
| 10 | KLDA with SVM        | 7                       | 0.602941             | 0.397059 | 0.397059 |
| 11 | KLDA with LOGISTIC   | 7                       | 0.617647             | 0.382353 | 0.382353 |
| 12 | VGG with MLP         | 4096                    | 0.382353             | 0.617647 | 0.617647 |
| 13 | VGG with SVM         | 4096                    | 0.323529             | 0.676471 | 0.676471 |
| 14 | VGG with LOGISTIC    | 4096                    | 0.323529             | 0.676471 | 0.676471 |
| 15 | RESNET with MLP      | 2048                    | 0.014706             | 0.985294 | 0.985294 |
| 16 | RESNET with SVM      | 2048                    | 0.014706             | 0.985294 | 0.985294 |
| 17 | RESNET with LOGISTIC | 2048                    | 0.014706             | 0.985294 | 0.985294 |

#### Yale-Face Database

|    | Feature              | Reduced Dimension Space | Classification Error | Accuracy | F1-Score |
|----|----------------------|-------------------------|----------------------|----------|----------|
| 0  | PCA with MLP         | 55                      | 0.058824             | 0.941176 | 0.941176 |
| 1  | PCA with SVM         | 55                      | 0.117647             | 0.882353 | 0.882353 |
| 2  | PCA with LOGISTIC    | 55                      | 0.058824             | 0.941176 | 0.941176 |
| 3  | KPCA with MLP        | 55                      | 0.823529             | 0.176471 | 0.176471 |
| 4  | KPCA with SVM        | 55                      | 0.764706             | 0.235294 | 0.235294 |
| 5  | KPCA with LOGISTIC   | 55                      | 0.470588             | 0.529412 | 0.529412 |
| 6  | LDA with MLP         | 14                      | 0.176471             | 0.823529 | 0.823529 |
| 7  | LDA with SVM         | 14                      | 0.058824             | 0.941176 | 0.941176 |
| 8  | LDA with LOGISTIC    | 14                      | 0.058824             | 0.941176 | 0.941176 |
| 9  | KLDA with MLP        | 14                      | 0.117647             | 0.882353 | 0.882353 |
| 10 | KLDA with SVM        | 14                      | 0.058824             | 0.941176 | 0.941176 |
| 11 | KLDA with LOGISTIC   | 14                      | 0.058824             | 0.941176 | 0.941176 |
| 12 | VGG with MLP         | 4096                    | 0.647059             | 0.352941 | 0.352941 |
| 13 | VGG with SVM         | 4096                    | 0.588235             | 0.411765 | 0.411765 |
| 14 | VGG with LOGISTIC    | 4096                    | 0.529412             | 0.470588 | 0.470588 |
| 15 | RESNET with MLP      | 2048                    | 0.117647             | 0.882353 | 0.882353 |
| 16 | RESNET with SVM      | 2048                    | 0.058824             | 0.941176 | 0.941176 |
| 17 | RESNET with LOGISTIC | 2048                    | 0.000000             | 1.000000 | 1.000000 |

From the above tables, we see that we get high accuracies when we apply RESNET  
With Logistic Regression

### 1.3 Problem-3

1. Use t-SNE based vizualization of faces? Does it make sense? Do you see similar people coming together? Can you do vizualization datasetwise and combined?

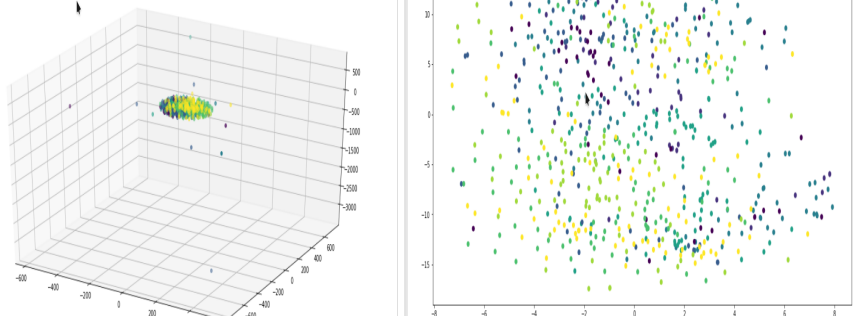

From the plots given below and present in the jupyter notebook, we see that after t-SNE, the faces with similar classes tend to come closer. Also, if we plot the faces in all datasets, we see the formation of clusters of similar classes.

#### IMFDB

#### IIIT-CFW

Database : IIIT-CFW

#### Yale

**Combined**

## 1.4 Problem-4

1. How do we formulate the problem using KNN? How do we analyze the performance?

We can see the problem as assigning a label to a point which is occurs maximum times in the labels of its k-nearest neighbours. The results with various feature extraction-techniques is as follows:

Dataset = IMFDB

|   | Feature         | Reduced Dimension Space | Classification Error | Accuracy | Precision |
|---|-----------------|-------------------------|----------------------|----------|-----------|
| 0 | PCA with KNN    | 55                      | 0.350                | 0.650    | 0.650     |
| 1 | KPCA with KNN   | 55                      | 0.350                | 0.650    | 0.650     |
| 2 | LDA with KNN    | 7                       | 0.125                | 0.875    | 0.875     |
| 3 | KLDA with KNN   | 7                       | 0.125                | 0.875    | 0.875     |
| 4 | VGG with KNN    | 4096                    | 0.125                | 0.875    | 0.875     |
| 5 | RESNET with KNN | 2048                    | 0.075                | 0.925    | 0.925     |

Dataset = IIIT-CFW

|   | Feature         | Reduced Dimension Space | Classification Error | Accuracy | Precision |
|---|-----------------|-------------------------|----------------------|----------|-----------|
| 0 | PCA with KNN    | 55                      | 0.558824             | 0.441176 | 0.441176  |
| 1 | KPCA with KNN   | 55                      | 0.514706             | 0.485294 | 0.485294  |
| 2 | LDA with KNN    | 7                       | 0.735294             | 0.264706 | 0.264706  |
| 3 | KLDA with KNN   | 7                       | 0.735294             | 0.264706 | 0.264706  |
| 4 | VGG with KNN    | 4096                    | 0.441176             | 0.558824 | 0.558824  |
| 5 | RESNET with KNN | 2048                    | 0.000000             | 1.000000 | 1.000000  |

Dataset = Yale

|   | Feature         | Reduced Dimension Space | Classification Error | Accuracy | Precision |
|---|-----------------|-------------------------|----------------------|----------|-----------|
| 0 | PCA with KNN    | 55                      | 0.294118             | 0.705882 | 0.705882  |
| 1 | KPCA with KNN   | 55                      | 0.294118             | 0.705882 | 0.705882  |
| 2 | LDA with KNN    | 14                      | 0.058824             | 0.941176 | 0.941176  |
| 3 | KLDA with KNN   | 14                      | 0.058824             | 0.941176 | 0.941176  |
| 4 | VGG with KNN    | 4096                    | 0.588235             | 0.411765 | 0.411765  |
| 5 | RESNET with KNN | 2048                    | 0.000000             | 1.000000 | 1.000000  |

The various metrics to analyze performance are accuracy,precision,classification-error,f1-score etc

## 1.5 Problem-5

1. Take a combination of IIIT-CFW and IMFDB datasets and try to classify the face as male/female.Basically, the problems is a binary classification problem of Gender Determination.

### 2. Real Life Applications of Solution-

- (a) In the age of digital media, we have a lot of data of people's faces in different orientations and environments.
- (b) If we are able to develop a model, that can predict a person's gender with a satisfactory accuracy, then we can easily track movement of people.
- (c) It will be very helpful in improving security at airports and offices where people may try to forge their gender to avail benefits.

### 3. Pipeline-

- (a) Load both the datasets and combine them using vstack.
- (b) Create a new label set with 0 as Female and 1 as Male.
- (c) Try all the feature extraction techniques along with the various classifiers.
- (d) Evaluate the above methods based on accuracy,precision,f1-score etc.

### 4. Metrics Used-

- (a) Accuracy,Precision,F1-Score.

We see that RESNET+KNN OR RESNET+LOGISTIC perform the best

Some Examples of correct and Wrong predictions are given at end of the jupyter notebook

|    | Feature              | Reduced Dimension Space | Classification Error | Accuracy | F1-Score | Precision |
|----|----------------------|-------------------------|----------------------|----------|----------|-----------|
| 0  | PCA with MLP         | 55                      | 0.148148             | 0.851852 | 0.851852 | 0.851852  |
| 1  | PCA with SVM         | 55                      | 0.231481             | 0.768519 | 0.768519 | 0.768519  |
| 2  | PCA with LOGISTIC    | 55                      | 0.185185             | 0.814815 | 0.814815 | 0.814815  |
| 3  | PCA with KNN         | 55                      | 0.194444             | 0.805556 | 0.805556 | 0.805556  |
| 4  | KPCA with MLP        | 55                      | 0.148148             | 0.851852 | 0.851852 | 0.851852  |
